CAUTION Bulletin
Number 1 of 2002
July 08, 2002

Subject: Use of Lubricants on Regulator Exhaust Valve P/N 510-552
Products Affected: KMDSI Part #510-552

The use of lubricants of any type (i.e., silicone grease, or similar) on molded silicone rubber parts such as exhaust valves or diaphragms, *must be avoided*.

Use of such compounds can deteriorate the physical properties of the components. In addition, lubricants can attract and hold debris that may cause a valve to leak. Also, the same practice applies for the diaphragm.
