Product Bulletin #9 of 2005

New SuperFlow® 350 Regulator Body, KMDSI Part #545-080

Kirby Morgan Dive Systems, Inc. has redesigned its SuperFlow 350 regulator body. This new body, KMDSI Part #545-080, allows for easy replacement of the exhaust valve flange, eliminating the need to purchase a new regulator body in the event the exhaust valve flanges are damaged.

To replace the flange, users and technicians will need to purchase the new SuperFlow 350 Flange Kit, KMDSI Part #525-027. The kit includes a flange, a rubber gasket, and two replacement screws.

The new regulator body offers identical performance to the prior regulator body and has the same dimensions. Installation by a trained KMDSI technician is recommended.

This item has been in production since January 2005.

Note the two screw holes on the back of the regulator body. This is where the flange connects to the regulator.

Interior of the regulator body.

The SuperFlow 350 Flange Kit must be purchased separately.
